

Explain how the WWW lifecycle work

Example: www.emag.com

1. User opens the browser (Google Chrome), enters URL: www.emag.ro

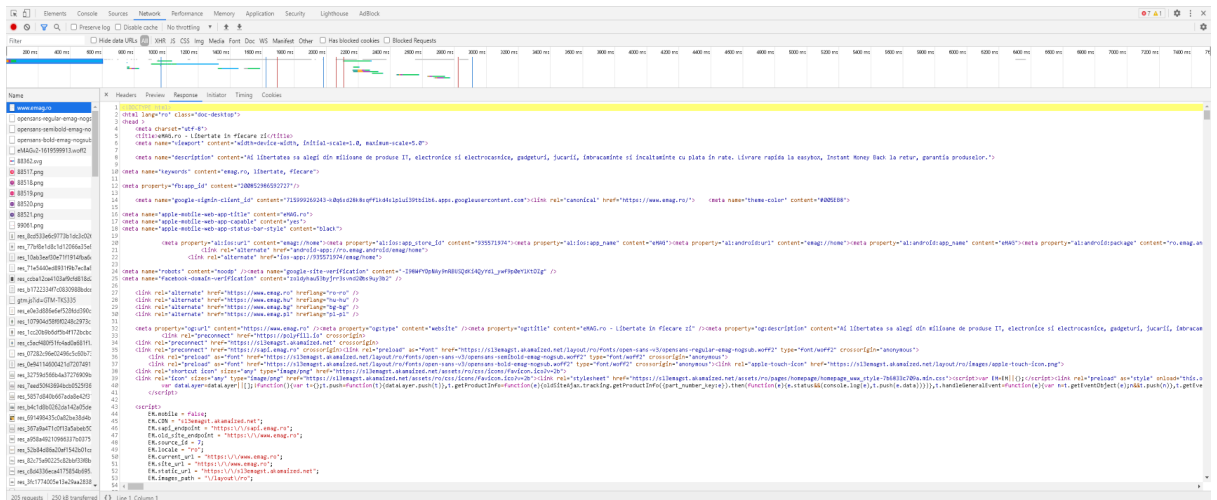

2. The Operating System (OS) connects to the DNS server.

DNS server returns IP address ranging from 91.206.37.0 to 91.206.37.255.

3. Now the browser has the IP.

4. Browser sends “http get” command to web server to request data.

5. Web server returns HTML data.

6. Web browser renders HTML web page.
